Warning information: The biological matrix undergoes viral testing, and the final product is aliquoted to customer specifications. All lots have been tested by an FDA-approved method and found to be negative for human immunodeficiency virus RNA (HIV-1 RNA), antibodies to human immunodeficiency virus (anti-HIV 1/2), antibodies to hepatitis C virus (HCV), hepatitis C virus RNA (HCV RNA), non- reactive for hepatitis B surface antigen (hbsAg), and non-reactive by a screening test for syphilis. However, no test method can provide total assurance that hepatitis b virus, hepatitis c virus, human immunodeficiency virus, or other infectious agents are absent. Thus, the biological matrix should be handled at the bio-safety level 2 as recommended by the CDA/NIH manual "biosafety in microbiological and biomedical laboratories, from potentially infectious human serum or blood specimens"
