## LowBinding Buffer-IV

## Assay diluent for reducing nonspecific binding, cross-reactivities and matrix effects in immunoassays

| LBA-004-0250  |
|---|
| L118753446  |
| $7.2 \pm 0.2$   |
| 2-8°C   |
| After receiving, 12 months for unopened and 6 months for opened |
|   |

## **Fields of application**

ELISA, IHC, Western Blot and Protein Array.

## Instructions for use

- LowBinding buffer IV reduces low-affinity bindings and offers a smooth reduction of non-specific signal. Thus it fits the immunoassay that capture and detection reagents have moderate binding affinity to analyte (K<sub>d</sub>> 10<sup>-7</sup> M). In the assay, the specific signal is not depressed.
- When the capture and detection reagents have high binding affinity to analyte (K<sub>d</sub> <10<sup>-10</sup> M), *LowBinding buffer* II, III and V are recommended.
